

News from the Technology Team

For the past 8 months, Mrs. Miglin and Sr. Marie's Technology Teams (both parents and students of 7th grade and 8th grades) have been working hard to improve the school's computer labs. It now consists of 27 new All-In-One computers, a new smart board and 30 i-pads. We are in the process of buying 30 new head phones for the students. The computer lab is not just a room with many computers. It is a newer and more advanced system. The design and layout of the lab serves as a great instruction room. With everyone facing the same direction toward the smart board, it allows both the instructor and the students to teach and learn in a more effective way. The All-in-One each has the newer versions of the Microsoft Office, and Windows 10. The Technology Team meets every Wednesday to ensure that the lab is easy to access and fulfills our long-term goals. We clean and keep everything in the lab in good condition. Mrs. Miglin also worked very hard to purchase new laptops for the teachers. We love our school and computer lab!
