THE LATEST TECHNOLOGY TEAM NEWS

A new technology team has been assembled! This is St. Nicholas' second year with a student-centered (grades 7 and 8) Technology Team. The team has made technological advancements to our school which enables the school to surpass limits and maximize efficiency as it never could before. We now have brand new, state of the art Lenovo Chromebooks that allow our students to excel and become more productive in their studies. We've also updated and reprogrammed the software on our iPads and computers to make learning more convenient for our students. We plan to make many more improvements to the technology of the school. Four additional Smartboards have been installed for the classrooms with two more on the way! We are replacing all the out-of-date headphones in our technology lab, and a wifi equipped high definition projector has been added to our school auditorium/gym. We hope our work and efforts will inspire other students to join the Technology Team when their time comes.

God Bless You!
